A Brief Review of General Relativity

- Page 28, Eq. (1.115). Change

\[ v^x = \frac{v^x' + V}{1 + v^x'V}, \quad v^y = \frac{Wv^y'}{1 + v^x'V}, \quad v^z = \frac{Wv^z'}{1 + v^x'V}. \]

\[ \rightarrow \]

\[ v^x = \frac{v^x' + V}{1 + v^z'V}, \quad v^y = \frac{Wv^y'}{W(1 + v^z'V)}, \quad v^z = \frac{Wv^z'}{W(1 + v^z'V)}. \]

- Page 32, Eq. (1.140). Change

\[ \mathcal{L}_\phi TV = \phi \mathcal{L}_V T, \]

\[ \rightarrow \]

\[ \mathcal{L}_\phi TV = \phi \mathcal{L}_V T - V\mathcal{L}_T \phi, \]

- Page 32, Eq. (1.141). Change

\[ \mathcal{L}_V \phi = V^\nu \partial_\nu \phi = \frac{d\phi}{d\lambda}, \]

\[ \rightarrow \]

\[ \mathcal{L}_V \phi = V^\nu \partial_\nu \phi = \frac{d\phi}{d\lambda}, \]

- Page 33, four lines before Eq. (1.147). Change

...not all bases are such that \( e_\mu \cdot e_\nu \neq \eta_{\mu\nu} \)

\[ \rightarrow \]

...not all bases are such that \( e_\mu \cdot e_\nu = \eta_{\mu\nu} \)

- Page 38, Eq. (1.174). Change

\[ \mathcal{L}_\eta \xi = \mathcal{L}_\xi \eta = 0, \]

\[ \rightarrow \]

\[ \mathcal{L}_\eta \xi = -\mathcal{L}_\xi \eta = 0, \]
Page 43, Eq. (1.196). Change

\[ \frac{d^2(x^\mu + \xi^\mu)}{d\lambda^2} + \Gamma^\mu_{\alpha\beta}(x + \xi) \frac{d(x^\alpha + \xi^\alpha)}{d\lambda} \frac{d(x^\beta + \xi^\beta)}{d\lambda} = 0. \]

\[ \rightarrow \]

\[ \frac{d^2(x^\mu + \xi^\mu)}{d\lambda^2} + \Gamma^\mu_{\alpha\beta}(x^\mu + \xi^\mu) \frac{d(x^\alpha + \xi^\alpha)}{d\lambda} \frac{d(x^\beta + \xi^\beta)}{d\lambda} = 0. \]

Page 44, Eq. (1.202). Change

\[ R_{\alpha[\beta\gamma\delta]} = 2(R_{\alpha\beta\gamma\delta} + R_{\alpha\delta\beta\gamma} + R_{\alpha\gamma\delta\beta}) = 0. \]

\[ \rightarrow \]

\[ 3!R_{\alpha[\beta\gamma\delta]} = 2(R_{\alpha\beta\gamma\delta} + R_{\alpha\delta\beta\gamma} + R_{\alpha\gamma\delta\beta}) = 0. \]

Page 45, Eq. (1.207). Change

\[ \Gamma^r_{\theta\theta} = -\sin \theta \cos \theta, \quad \Gamma^r_{r\theta} = \cot \theta. \]

\[ \rightarrow \]

\[ \Gamma^\theta_{\phi\phi} = -\sin \theta \cos \theta, \quad \Gamma^\phi_{\theta\phi} = \cot \theta. \]

Page 45, Eq. (1.208). Change

\[ R^r_{\theta\theta r} = -\frac{1}{R^2_s} g_{\theta\theta} = -\sin^2 \theta, \quad R^r_{\theta\theta r} = \frac{1}{R^2_s} g_{rr} = 1, \]

\[ \rightarrow \]

\[ R^\theta_{\phi\phi \theta} = -\frac{1}{R^2_s} g_{\theta\theta} = -\sin^2 \theta, \quad R^\phi_{\theta\phi \theta} = \frac{1}{R^2_s} g_{\theta\theta} = 1, \]

Page 45, after Eq. (1.208). Change

while the Ricci scalar is simply \( R = 1/R^2_s \).

\[ \rightarrow \]

while the Ricci tensor is \( R_{ij} = g_{ij}/R^2_s \) and the Ricci scalar is simply given by \( R = 2/R^2_s \).

Page 48, Eq. (1.220). Change

\[ R_{\mu\nu} = 8\pi \left( T_{\mu\nu} - \frac{1}{2} T g_{\mu\nu} + \frac{1}{4\pi} \Lambda g_{\mu\nu} \right), \]

\[ \rightarrow \]

\[ R_{\mu\nu} = 8\pi \left( T_{\mu\nu} - \frac{1}{2} T g_{\mu\nu} + \frac{1}{8\pi} \Lambda g_{\mu\nu} \right), \]

Page 49, one line after Eq. (1.223). Change

...the coordinate time runs slower than the proper time.

\[ \rightarrow \]

...the proper time runs slower than the coordinate time.
Page 51, Eq. (1.229). Change

\[
\frac{d}{d\tau} \left[ \left( 1 - \frac{2M}{r} \right)^{-1} \frac{dr}{d\tau} \right] = r \left[ \left( \frac{d\theta}{d\tau} \right)^2 + \sin^2 \theta \left( \frac{d\phi}{d\tau} \right)^2 \right],
\]

\[
\rightarrow \frac{d}{d\tau} \left[ \left( 1 - \frac{2M}{r} \right)^{-1} \frac{dr}{d\tau} \right] = r \left[ \left( \frac{d\theta}{d\tau} \right)^2 + \sin^2 \theta \left( \frac{d\phi}{d\tau} \right)^2 \right] - \frac{M}{r^2} \left[ \left( \frac{dt}{d\tau} \right)^2 + \left( 1 - \frac{2M}{r} \right)^{-2} \left( \frac{dr}{d\tau} \right)^2 \right].

\( \rightarrow \)

\( c_s^2 = \frac{c^2 \gamma(\gamma - 1)\epsilon}{c_s^2 + \gamma \epsilon} = \left[ \frac{c^2 (h - c^2)}{h} \right] (\gamma - 1) = \frac{c^2 \gamma p}{\rho h}. \)

- Page 118, footnote 34. Change

“A fluid obeying the ideal-fluid equation of state with \( \epsilon = 0 \) would also have a zero temperature and could provide a reasonable model for a cold and old neutron star.”

“A fluid obeying a general polytropic equation of state can have, at least mathematically, \( \epsilon = 0 \), although such a choice would be difficult to justify from a physical point of view. However, if the polytropic transformation is isentropic, then the specific internal energy is fully determined and is proportional to the rest-mass density [cf. Eq. (2.248) and discussion around it]. A polytropic and isentropic equation of state is often used to obtain a reasonable approximation for a cold and old neutron star.”

- Page 119, after Eq. (2.247)

Put differently, a polytropic equation of state is equivalent to an ideal-fluid equation of state only under those isentropic transformations for which the adiabatic index of the fluid \( \gamma \) is the same as the adiabatic index of the polytrope \( \Gamma \).”

“Put differently, if a fluid obeys the ideal-fluid equation of state and is isentropic, then its equation of state can also be written in a polytropic form [cf., Eq. (2.242)], with polytropic exponent \( \Gamma = \gamma \); in this case, the polytropic exponent is also the adiabatic index. On the other hand, if a fluid obeys the polytropic equation of state and is isentropic, then it is at least formally possible to express the pressure as \( p = \rho c(\Gamma - 1) \) [cf., Eq. (2.228)]. However, this does not necessarily mean that such a fluid obeys an ideal-fluid equation of state. For this to be the case, \( \Gamma \) must be the ratio of the specific heats \( c_p/c_v \) and the specific internal energy must be a function of the temperature only.”
Page 119, Eq. (2.249). Change

\[ c_s^2 = \frac{\Gamma p}{\rho h} = \frac{\Gamma (\Gamma - 1)p}{\rho(\Gamma - 1) + \Gamma p} = \left( \frac{1}{\Gamma K \rho^{\Gamma-1}} + \frac{1}{\Gamma - 1} \right)^{-1}. \]

\[ \rightarrow \]

\[ c_s^2 = c^2 \frac{\Gamma p}{\rho h} = c^2 \frac{\Gamma (\Gamma - 1)p}{\rho(\Gamma - 1) + \Gamma p} = c^2 \left( \frac{1}{\Gamma K \rho^{\Gamma-1}} + \frac{1}{\Gamma - 1} \right)^{-1}. \]

$\psi = (\gamma/\bar{\gamma})^{1/12} = (\gamma/f)^{1/12}.$
$\Rightarrow$
$\psi = (\gamma/\tilde{\gamma})^{1/12} = (\gamma/f)^{1/12}.$

• Page 384, second equation in Exercise 7. Change
$D_i D_j \phi = -\frac{1}{2\phi} \bar{D}_i \bar{D}_j + \frac{1}{2\phi^2} \partial_i \phi \partial_j \phi.$
$\Rightarrow$
$D_i D_j \phi = \tilde{D}_i \tilde{D}_j \phi + \frac{2}{\phi} \partial_i \phi \partial_j \phi - \frac{1}{\phi} \gamma_{ij} \partial^k \phi \partial_k \phi.$
Numerical Relativistic Hydrodynamics: Finite-Difference Methods

• Page 393, Eq. (8.16). Change

\[ \epsilon_j^{(h)} = \hat{C} h \hat{p}_j + \mathcal{O}(h^{p_j+1}) , \]

→

\[ \epsilon_j^{(h)} = Ch p_j + \mathcal{O}(h^{p_j+1}) , \]

• Page 393, Eq. (8.30). Change

\[ \tilde{p} := \log \left( \frac{R(h,k)}{\log(h/k)} \right) , \]

→

\[ \tilde{p} := \log \left( \frac{|R(h,k)|}{\log(h/k)} \right) , \]

• Page 395, the 7th line before Eq. (8.34). Change

“...its application across a time interval \( \Delta t \) introduces an associate truncation error \( \epsilon_j(h) \).”

→

“...its application across a time interval \( \Delta t \) introduces an associated truncation error \( \epsilon^{(h)} \).”

• Page 406, Eq. (8.87). Change

\[ \tilde{u}(x, t) = e^{-\epsilon k^2 t} e^{ik\left[ x-(v+\beta k^2)t \right]} , \]

→

\[ \tilde{u}(x, t) = e^{-\epsilon k^2 t} e^{ik\left[ x-(\lambda+\beta k^2)t \right]} , \]
Note that $\rho^*, L$ is different from $\rho^*, R$, thus reproducing the contact discontinuity and justify that the Riemann solver is complete.

Relativistic Hydrodynamics of Non-Selfgravitating Fluids

- Page 518, Eq. (11.84). Change

\[ \frac{dW}{W} = \frac{M}{r^2W} dr + \frac{u}{W} du. \]

→

\[ \frac{dW}{W} = \frac{M}{r^2W^2} dr + \frac{u}{W^2} du. \]
Relativistic Hydrodynamics of Selfgravitating Fluids

- Page 596, 12th line after Eq. (12.13)
  "M = 2.01 ± 0.4 M_⊙" → "M = 2.01 ± 0.04 M_⊙"

- Page 597, caption of Fig. 12.1
  "M = 2.01 ± 0.4 M_⊙" → "M = 2.01 ± 0.04 M_⊙"

- Page 601, second term in Eq. (12.31). Change
  \[ H_0^2 = \frac{1}{R_i^2} \left[ 1 - \frac{\varepsilon(1 + w_i)^2}{w_i} \right] . \]
  →
  \[ H_0^2 = \frac{1}{R_i^2} \left[ 1 - \frac{\varepsilon(1 + w_i)^2}{w_i} \right] . \]

- Page 601, second paragraph, change:
  ... the energy density \( \rho(r) \) and the pressure \( p(r) \) ...
  →
  ... the energy density \( e(r) \) and the pressure \( p(r) \) ...
